

MasterPlan: Wastewater

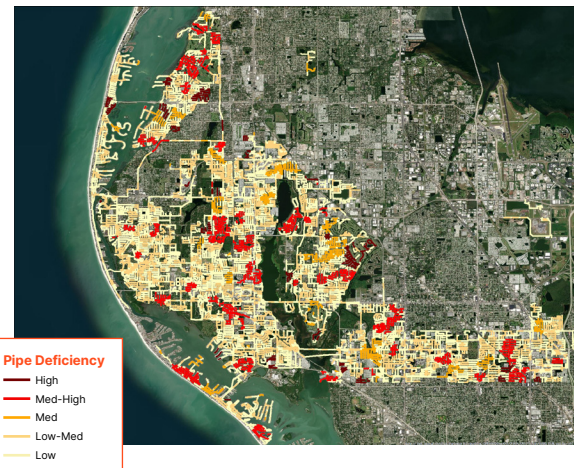

Pipe Deficiency Assessment

Product Overview

ASTERRA MasterPlan for wastewater systems provides actionable insights to your wastewater system asset management plan in one easy data layer. Our patented system uses a newly developed algorithm that's been trained on five years of system leaks discovered by ASTERRA Recover, our leak detection and analysis product. The algorithm assesses pipe deficiencies using multiple synthetic aperture radar (SAR) images and can observe an entire pipe system, even for large cities, using multiple satellite passes.

The trained algorithm then scores pipe segments exhibiting non-surfacing leaks detected in one or more images; it also analyzes leak location clusters within them. Data points are then scientifically combined into a single GIS data output with pipes scored on a 1 – 5 scale: 1 indicates low levels of deficiency observed; 5 denotes high levels of deficiency. The data inputs easily to any GIS system or asset planning model.

Utilities and engineers use MasterPlan to gain insight into the pipes' actual condition. The system is compatible with all GIS and GIS-based asset planning model software and integrates with attribute data such as pipe age, material, and work orders from surfacing leaks. MasterPlan adds a valuable level of refinement to pipe management planning.

The MasterPlan Differentiators

MasterPlan provides unique insights that are not available elsewhere, such as an actual measurement of non-surfacing pipe leaks — not a predictive analysis. The system is completely non-invasive as data is collected via satellite, and the pipes' size and composition do not matter. The 1,350-sq-mile coverage area observes and analyzes the most expansive systems with unmatched speed and efficiency.

What's Included?

- GIS dataset with deficiency levels assigned by Pipe ID
- Summary report
- Free online viewer
- ASTERRA customer support

MasterPlan is available as a stand-alone service or as an add-on to ASTERRA Recover leak detection and analysis product. MasterPlan provides customers with pipe deficiency information in a fast, affordable, efficient manner. We help customers improve operational efficiency and optimize budgets with intelligence that facilitates proactive repair and planning.

About ASTERRA

Utilis developed the ASTERRA products to use satellite-based synthetic aperture radar (SAR) to locate and analyze moisture accumulating underground. Our products include MasterPlan for pipe deficiency assessment; Recover for leak detection; and EarthWorks for ground infrastructure assessment. ASTERRA pierces clouds, forests, and even pavement to assess entire systems quickly and efficiently. Our first commercial use was in 2016. Since then, 36,000 leaks have been verified, saving 9,200 million gallons of drinkable water and 21,800 MWH of energy every year, savings that continually grow.

Why Choose MasterPlan?

- A full system-wide view to set replacement priorities
- Monitor areas close to sensitive habitat with minimal disruption
- Adds a valuable level of refinement to pipe management planning
- Non-invasive assessment means no cost or disruptions from digging
- Completely pipe agnostic, working on pipes of any size or material
- Easy integration with all GIS and asset management tools such as those from partners Esri and Innozyte
